

DIAMOND BOTOX
Hair Repair Therapy

IS YOUR HAIR TIRED, WEAK & DULL?

DIAMOND BOTOX IS HERE TO HELP

Diamond Botox Hair Repair Therapy penetrates deep into the hair depositing essential vitamins and nutrients, while replenishing the natural oils that impact hair growth, shine and manageability.

Diamond Botox can be customized to repair a variety of common types of damage: thinning of hair, loss of tensile strength, damage caused by coloring, and extreme damage caused by chemical processing or constant heat styling.

WHY USE DIAMOND BOTOX?

The hair experiences the “feeling” of rebirth and restoration that the skin experiences after a “botox” treatment. Infused and fortified with Ceramide III, derived from Meadow’s Foam which provides a protective barrier for all hair types.

MAIN INGREDIENTS

Ceramides: target the scale of the cuticle to create immediate improvement in the strength and appearance of the hair. This ingredient is widely used to repair the damage of chemical relaxers.

Meadowfoam: a conditioning ingredient that promotes moisture retention and elasticity while providing significant heat protection.

Turnip Oilseed: a very versatile oil that strengthens, detangles, smooths, and softens the hair, infusing light moisture in order to prevent static and flyaway hairs.

Vitamins E, B3, and B5: three key vitamins involved in **stimulating new hair growth** and natural production of the keratin protein.

MATERIALS

- DIAMOND BOTOX AMPULE
- WARM WATER
- EXTRACTION SYRINGE
- HAIR BRUSH
- MIXING BOWL
- BLOW DRYER
- FLAT IRON

INSTRUCTIONS

1 HAIR PREPARATION

Wash the hair using a clarifying shampoo in order to eliminate impurities, oils and other build-up. Rinse the hair well with warm water and proceed to towel dry.

2. MIXING THE TREATMENT

Extract the appropriate amount of Diamond Botox from the ampule using a syringe and combine with warm water in a bowl. Please refer to the chart on the next page for corresponding mixing proportions, depending on the desired results. Proceed to mix Diamond Botox with warm water until a homogeneous mousse is formed.

3. APPLICATION

Section by section proceed to apply Diamond Botox treatment onto the hair using an application brush, starting approximately 1/8 of an inch from the roots and working down to the ends. Continue the application process, section by section, until all of the hair is saturated with the treatment. Comb through and massage the ends to allow the treatment to penetrate the hair shaft. Place a plastic cap over the hair.

4. PROCESSING

Process the treatment for approximately 15-20 minutes under a heat source. You may process an additional 5 minutes for very thick or resistant hair. Allow 1-2 minutes for the hair to cool down. After processing, rinse the hair briefly with lukewarm water to remove any excess product left on the hair surface.

5. SEALING

To seal the treatment, hair must be dried and then flat ironed. Start by blow drying the hair until fully dry. Proceed to flat iron the hair in sections – please refer to the chart on the next page for the recommended temperature settings for the flat iron, depending on the hair type and desired results. (Please note: It's not necessary to divide the hair into very fine sections such as you would for Keratin Treatments).
